# By the end of this module, students should be able to:

---

1. Analyse motion of different locomotion mechanisms
2. Understand key working principles of selected sensors and actuators used in robots; and select appropriate sensors and actuators for a robot system to achieve a given task
3. **Apply basic robot motion control principles**
4. **Utilise ROS for mobile robot simulation in a virtual environment**

What are  
characteristics  
of a robot?

# Definition of Robot

## Robotics Industries Association

A robot is a reprogrammable, multifunctional manipulator designed to move material, parts, tools or specialized devices through variable programmed motions for the performance of a variety of tasks.

## ISO 8373:2012

A robot is an actuated mechanism programmable in two or more axes with a degree of autonomy, moving within its environment to perform intended tasks.

# Vocabulary in Robotics

(ISO 8373:2012)

- **Actuator:** power mechanism used to effect motion of the robot
- **Reprogrammable:** designed so that the programmed motions or auxiliary functions can be changed without physical alterations
- **Autonomy:** ability to perform intended tasks based on current state and sensing, without human intervention
- **Manipulator:** machine in which the mechanism usually consists of a series of segments, jointed or sliding relative to one another, for the purpose of grasping and/or moving objects, usually in several degrees of freedom

Notice:

- the robots
- the environments
- the applications

What sequence of tasks  
does the robot perform?

Identify the latin alphabets on objects (machine vision)

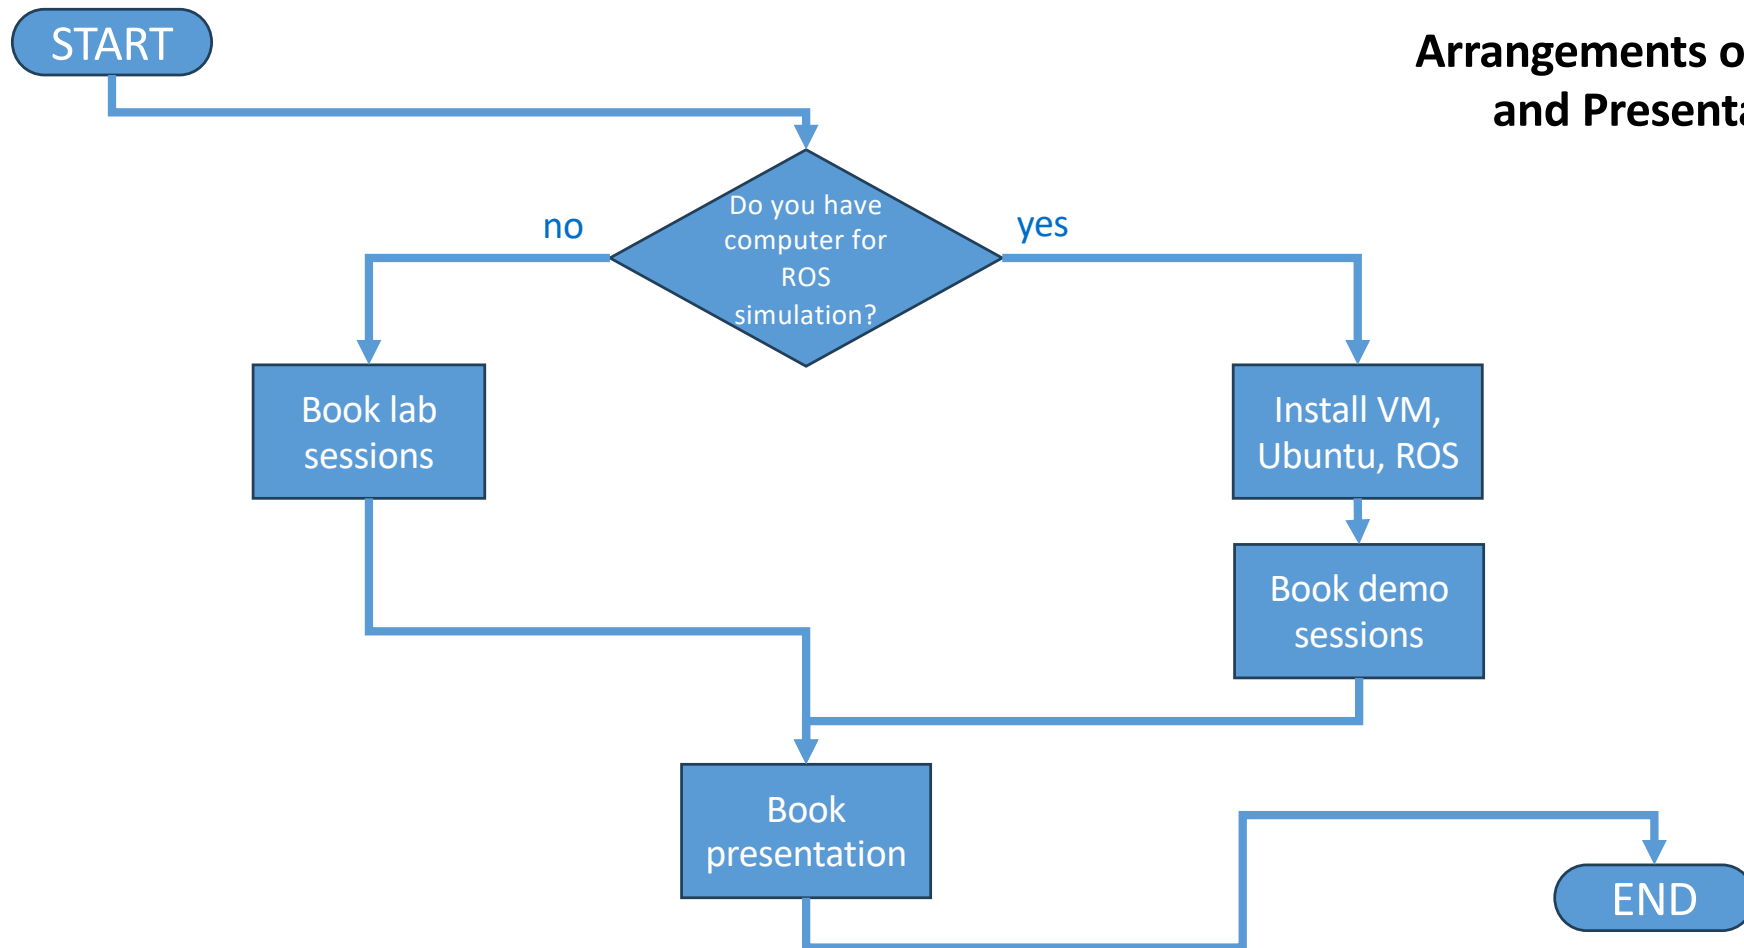

# Academic and Administrative Matters of the Course (Part 2)

## Arrangements of Lab and Presentation

## What to do after this session

- Book a slot for presentation. The link is in Canvas.
- Try installing Virtual Machine, Ubuntu 20.04 and ROS Noetic.
  - The guideline is in Canvas.
  - Practice “Ubuntu and Basic ROS” exercise. The guideline is in Canvas.
- If you are without access to a computer with Ubuntu 20.04 and ROS Noetic, you can book lab sessions. The link is in Canvas.

# THANK YOU
